

Property Management Solutions

Apartments, townhomes, and standalone units we take care of it all.

We offer many in house solutions to pest problems:

- Chemical treatment for most pest issues such as bed bugs, cockroaches, ants, rodents, etc...
- Humane wildlife removal and prevention
- Thermal Heat Remediation for major infestations such as bed bugs.
- Scheduled regular inspection services.
- Tenant education and information seminars.

ThermAll works closely with property managers, landlords and tenants to ensure a quick and non-intrusive treatment. We also offer green, earth friendly, and pet friendly solutions.

Integrated Pest Management

For on going or multi-tenant problems, ThermAll recommends a custom Integrated Pest Management Solution to be designed for your multi dwelling properties to slow and stop the infestations before they reach other units.

When it comes to the challenges of an ever changing pest control problem such as bed bugs, cockroaches, or rodents, a customized IPM (Integrated Pest Management) program for your property can be put in place to be both cost effective and show results second to none.

ThermAll can design an IPM for your multi dwelling properties to suit your needs and budget.

Bed Bug Management

Bed Bugs are becoming an epidemic in North America. Increased travel and tighter pesticide regulations are some of the reasons why the spread of bed bugs are causing headaches for residents, and property owners.

ThermAll has a proven success rate in removing bed bug infestations in multi dwelling and housing units. We combine many pest control techniques in combatting the bed bug problem surrounding us.

ThermAll is an expert in Thermall Heat Remediation, the most efficient and proven method in killing bed bugs and bed bug eggs located in homes, condos and apartments.

Along with Thermal heat, we also provide a repeated chemical solution to shorten the infestation cycle.
